

Fitness & Physique Roadmap — May 2026 to May 2027

Current Starting Point (May 2026)

Current Stats

- Weight: ~100 kg
 - Training Level: Beginner → Early Intermediate
 - Stronger Areas:
 - Back
 - Shoulders
 - Biceps
 - Weaker Areas:
 - Chest (especially upper chest)
 - Triceps
 - Current Goal:
 - Reach ~80–85 kg
 - Athletic muscular physique
 - Visible chest/back development
 - Visible arms
 - Leaner face and waist
-

CORE STRATEGY

Main Philosophy

The goal is NOT perfection.

The goal is:

- Consistency during free phases
 - Maintenance during exam phases
 - Avoiding chaotic eating cycles
-

NUTRITION PLAN

Daily Calorie Target

Fat Loss Phase

- 1900–2200 kcal average

Exam/Maintenance Phase

- 2200–2500 kcal average
-

Protein Target

Minimum

- 110g daily

Ideal

- 120–140g daily
-

Main Protein Sources

- Whey protein
 - Soya chunks
 - Dal
 - Curd
 - Eggs
 - Chicken
 - Milk
 - Besan
-

Cheat Meal Structure

Allowed:

- 1–2 controlled cheat meals weekly
- Social eating with friends
- Pizza/rolls occasionally

NOT allowed:

- Whole-day binge eating
 - Emotional eating spirals
 - "Diet ruined" mindset
-

TRAINING STRUCTURE

Training Frequency

Free Phases

- 5–6 gym days/week

Busy Exam Phases

- 3–4 gym days/week minimum
-

Weekly Split Recommendation

Option 1 (Preferred)

Monday

Chest + Triceps

Tuesday

Back + Biceps

Wednesday

Shoulders + Abs

Thursday

Chest + Triceps

Friday

Back + Biceps

Saturday

Legs + Shoulders

Sunday

Active recovery / steps / social flexibility

PRIORITY MUSCLE GROUPS

1. Chest (Highest Priority)

Weaknesses

- Upper chest
- Pressing strength
- Chest activation

Focus

- Incline pressing
- Controlled eccentrics
- Progressive overload
- Dumbbell pressing stability

Main Exercises

- Incline DB Press
 - Incline Barbell Press
 - Flat Press
 - Pec Flyes
 - Machine Press
-

2. Back (Best Potential Body Part)

Strong Areas

- Rows
- Mid-back thickness

Weak Areas

- Lat width
- Lat activation

Focus

- Elbows-to-hips pulldown technique
- Single-arm lat work
- Slow eccentrics
- Stretch-focused movements

Main Exercises

- Lat Pulldown
 - T-Bar Row
 - Seated Rows
 - Single-Arm Rows
 - Straight Arm Pulldown
-

3. Shoulders

Goal

- Broader appearance
- Round delts

Focus

- Lateral raises
 - Rear delt work
 - Overhead pressing strength
-

4. Arms

Biceps

Focus:

- Strict curls
- Hammer curls
- Controlled negatives

Triceps

Focus:

- Overhead extensions
- Pushdowns
- Lockout strength

CARDIO & STEPS

Daily Steps

- 6k–10k average

Cardio

- Incline treadmill
- Crosstrainer
- Moderate intensity

Goal:

- Sustainability
 - Fat loss support
 - Recovery support
-

TIMELINE ROADMAP

PHASE 1 — MAY 15 TO JULY 3

Goal

Aggressive consistency phase.

Focus

- High gym consistency
- Fat loss acceleration
- Protein consistency
- Rebuilding eating structure

Expected Outcome

Weight

- ~94–96 kg

Visible Changes

- Leaner face
 - Better posture
 - Stronger back
 - Better shoulder shape
 - Slight chest improvement
 - Better energy and confidence
-

PHASE 2 — JULY EXAM WEEK

Goal

Maintenance.

Strategy

- 3–4 gym sessions/week minimum
- Maintain protein
- Avoid binge eating
- Maintain bodyweight range

Success Criteria

NOT gaining significant fat.

PHASE 3 — AUGUST TO SEPTEMBER END

Goal

Second major transformation phase.

Focus

- Push strength progression
- Continue fat loss
- Improve chest development
- Build shoulder width

Expected Outcome

Weight

- ~88-92 kg

Physique Changes

- Noticeably leaner
 - Visible arm improvement
 - Stronger V-taper
 - Better chest structure
-

PHASE 4 — OCTOBER EXAM + PRACTICAL PHASE

Goal

Maintenance with controlled momentum.

Training

- 3-4 sessions/week

Priority

- Protein consistency
- Sleep management
- Stress control

Important

Do NOT attempt aggressive fat loss during heavy academics.

PHASE 5 — NOVEMBER FINALS PHASE

Goal

Hold progress.

Rules

- Maintain gym frequency if possible
- Avoid stress overeating
- Keep protein high
- Maintain controlled calories

Success Metric

Maintaining physique progress.

PHASE 6 — DECEMBER TO JANUARY

Goal

Third major growth/recomp phase.

This is one of the most important windows.

Focus

- Push chest strength
- Continue back development
- Improve arm size
- Continue fat loss

Expected Outcome By January

Weight

- ~82–88 kg

Physique

- Athletic appearance
 - Visible muscle definition
 - Significant body composition improvement
-

PHASE 7 — JANUARY TO MARCH

Goal

Refinement phase.

Focus

- Improve muscularity
- Improve symmetry
- Maintain consistency

Expected Changes

- Better chest separation
 - More visible arms
 - Better shoulder capping
 - Leaner waist
-

PHASE 8 — MARCH EXAMS

Goal

Maintenance.

Same strategy:

- Protein
 - Controlled calories
 - Minimum training frequency
-

PHASE 9 — APRIL TO MAY 2027

Goal

Final visible transformation phase.

Focus

- Improve conditioning

- Maintain muscle
- Bring physique together

Expected Outcome By May 2027

Weight

- ~78–85 kg

Physique

- Athletic muscular build
 - Strong back
 - Improved chest
 - Visible biceps/triceps
 - Leaner face
 - Broad shoulders
 - Better posture
 - Noticeably transformed appearance
-

KEY RULES FOR SUCCESS

Rule 1

One bad meal must NEVER become a bad day.

Rule 2

Exam phases are for maintenance, not perfection.

Rule 3

Protein consistency matters more than perfect dieting.

Rule 4

Do not switch between extremes.

Avoid:

- starvation
 - binge eating
 - ultra strict cycles
-

Rule 5

Progress comes from repeated normal good days.

MOST IMPORTANT REALISTIC EXPECTATION

You do NOT need:

- perfect genetics
- zero social life
- impossible discipline

You need:

- enough months of controlled consistency
 - stable gym attendance
 - high protein
 - moderate calorie control
 - patience
-

FINAL OBJECTIVE BY MAY 2027

Become:

- visibly leaner
- stronger
- muscular
- athletic-looking
- disciplined
- physically confident

without destroying sustainability or academics.
